

UVA Brain Institute

The Brain Institute was founded at the University of Virginia with the mission to create a network of closely interacting basic, translational, data and clinical neuroscientists at multiple schools at UVA to address key problems in neuroscience for the benefit of society.

SEED FUNDING

Fueling Discovery

The Brain Institute awards innovative, high impact **seed funding** to collaborative teams of researchers, invests in shared equipment and network infrastructure, and helps recruit top scientists.

Improving the Human Condition

The Brain Institute aims to improve the human condition by moving discoveries from the lab to the clinic, providing clinical and translational research infrastructure, and fostering illustrative research programs. Key areas of research include Brain Development, Alzheimer's and Aging, Traumatic Brain Injury, Neuromodulation and Epilepsy.

Fostering the Next Generation

The Brain Institute supports neuroscience training via the **Presidential Fellowships in Collaborative Neuroscience** program, the undergraduate **Summer Research Internship Program (SRIP)**, the **Neuroscience Graduate Program** and through sponsoring related lectures and symposia across the University.
